

**Fast USB2 digital camera  
With stackable card design  
& Embedded DSP Capability**

## INTRODUCTION

---

**IDM-500** is a family of digital cameras for machine vision applications with a fast USB2 connection and an embedded digital signal processor that is capable of performing advanced image processing algorithms on the camera, on the fly. The IDM-500 is capable of storing a buffer of images on the camera without needing to send all of the images to the PC. These powerful yet compact cameras are intended for medical and industrial applications requiring superior image quality and high performance, and yet are priced attractively.
